

2016 Questions for PCSD Trustee Candidates

{Candidates}, is it appropriate for PCSD schools to expose children to a known carcinogen -- a hazardous agent proven by the May 2016, National Toxicology Study Results to cause two forms of cancer and other adverse health effects -- by continuously transmitting this carcinogen into student classrooms as a condition for receiving a public education, particularly when there is CA education code (Sections 32060-32066) that prohibits PCSD schools from doing so?

{Candidates}, how will you eliminate the immediate and latent toxic hazards of RF Microwave radiation in PCSD classrooms – hazards which students face due to the PCSD's current purchase, use and configuration of its proprietary wireless business equipment? What specific remedies do you recommend?

{Candidates}, given that evidence proves that the PCSD has engaged in a repeated pattern of withholding public information from the public and misleading parents and students about actual RF Microwave radiation levels in PCSD classrooms in 2013 and 2016, what will you do to ensure that the PCSD follows all state and federal laws, including the CA Public Records Act, to share complete, accurate, and truthful information about total, cumulative RF Microwave radiation exposures in PCSD classrooms?
